

Know exactly where your business stands — and what to fix next.

Most owners have never seen this. Your bookkeeper can't give it to you. We benchmark your actual numbers against the best operators in your industry, then hand you a specific, prioritized plan to improve margin and cash flow.

How the diagnostic works

Normalize	We turn your books into comparable operating metrics — every number traced back to your income statement, so it's verifiable, not hand-waved.
Benchmark	We measure you against two reference points — industry-average AND best-in-class — drawn from 477+ entries across 19 industries (CFMA, NAHB, RMA, IBISWorld, IRS, BLS).
Diagnose	We flag exactly which cost components and ratios are dragging your performance.
Prescribe	A Monthly Advisory Brief turns the diagnosis into a clear 'what to focus on next' written for an owner, not an accountant.

What you get

- **Income Statement** — multi-step P&L with gross-profit separation and CPA-ready footnotes.
- **Operational Benchmarking** — your expenses vs. industry peers, color-coded, line by line, tied to your income statement.
- **Financial Ratio Analysis** — liquidity, profitability, efficiency, and leverage vs. your industry.
- **Operational Diagnostics** — root-cause analysis on weak spots with dollar-impact estimates and corrective actions.

Why this isn't bookkeeping — and isn't a \$5,000/mo CFO

Your bookkeeper	A fractional CFO	Agility
Clean books and reports. No diagnosis, no benchmark, no path forward.	Strategic finance help, but it runs \$1,500–\$5,000+/mo and is built from scratch for each client — not a repeatable product.	Productized, benchmark-backed, delivered monthly — for a fraction of CFO cost.

Simple monthly tiers

Tier	Monthly	What's included
Foundation	\$500–\$750	Clean data feed: monthly bookkeeping, reconciliation, CPA-ready financials, tax-treatment flags. The on-ramp.
Diagnostic	\$1,200–\$1,800	The hero. Foundation plus the Operational Analysis (industry-avg + best-in-class benchmarking) and the Monthly Advisory Brief with a prioritized improvement path.
Advisory Partner	\$2,500–\$4,000	Diagnostic plus quarterly strategy, cash-flow planning, growth modeling, and priority access — effectively a fractional CFO.

Start with a free Benchmark Snapshot → see where you stand in 20 minutes.

The One-Time Operational Diagnostic

A complete, one-time performance diagnostic of your business — no subscription required. The fastest way to see exactly where you stand and what to fix, with zero long-term commitment.

What you receive

- A full Income Statement rebuilt from your data, with CPA-ready footnotes.
- Operational benchmarking of every cost line against industry-average and best-in-class.
- Financial ratio analysis vs. your industry (NAICS-matched).
- A written diagnostic of your biggest performance leaks, each with a dollar-impact estimate.
- A prioritized action list — what to fix first, second, third.

How it works

You provide	12 months of bank and credit-card statements (or accounting export). That's it.
Turnaround	5–10 business days from receipt of your data.
Investment	\$1,500–\$3,000, based on entity complexity and number of accounts. Quoted upfront — no surprises.
Risk reversal	If you continue with a monthly Diagnostic engagement, we credit your one-time fee toward your first six months.

Why no one else offers this

A bookkeeper categorizes transactions. A tax CPA files once a year, looking backward. Generic benchmark reports hand you averages and leave you to self-apply them. The one-time diagnostic is personalized to your actual numbers, benchmarked against the best in your field, and ends with a plan you can act on this quarter.
